A.D. 1875, 19th JULY. N° 2573.

Syringe.

(This Invention received Provisional Protection only.)

PROVISIONAL SPECIFICATION left by James Perrot Prince at the Office of the Commissioners of Patents, with his Petition, on the 19th July 1875.

I, JAMES PERROT PRINCE, of Davies Street, in the County of Middle-
5 sex, do hereby declare the nature of the said Invention for “AN IMPROVED
SYRINGE FOR SURGICAL PURPOSES,” to be as follows :—

My Invention relates to an improved syringe for surgical purposes,
such as the cure of certain diseases and the cleansing of deep wounds,
and the object of my improvement is to prevent the injection of the
10 liquid beyond the point where the action is required.

My improvement consists in so disposing the orifice or orifices of the
neck or nozzle of the syringe, that the liquid contained shall be
discharged or ejected backwards along the neck towards the point at
which the syringe is introduced. To this end the tubular neck or
15 nozzle of the syringe is made of sufficient length to reach beyond the
part to be treated, and it terminates preferably in a slightly enlarged
head or hollow bulb provided with one or more backwardly directed
orifices, through which the liquid is discharged.
